

# Mandatory assignment 3

---

## Task 8 – Advance plan

- Specify a given time period, transaction, type, or location and see only the relevant transactions and statistics.

I think the trick is to be able to recognize the element you are asking of. So, when I tell the program “Stavanger” it should use loops to get all the information with that word in it. The easiest way to do it is making a new array. Push the elements into the new array and make the new array 2d? Then use a for loop to run through the array and get all the information that is relevant to the word?
